CARILON POLYMERS CASE HISTORY

Dubois Breathing System

Using CARILON™ Polymers, Dubois' engineers designed a new disposable breathing system with a unique "Swivel Y" connector, replacing an adjustable metal and rubber joint. CARILON Polymers' natural lubricity lets the joint move easily, while the polymers' combination of strength, flexibility and resilience allows a snap-fit assembly. This lightweight connector provides lower supply costs than the previous design. For more information about CARILON Polymers, call 1-888-CARILON (888-227-4566).
